Please respond to Gene Stone &lt;genston@sbcglobal.net&gt;

1. Where is the IFMP Irradiated Fuel Management Plan? Who will have access to it, and when will it be available for SCE/CEP review?
2. Decontamination Period 2 includes design and installs Spent Fuel Pool Islanding, control room relocation and Security Modifications. Will or can this be near the expanded ISFSI pad? Will it include new ocean pipes?
3. Decontamination Period 4 includes upgrade of the Rail Spur in owner controlled area. Will this rail spur system stay in place until DOE removes all nuclear waste?
4. The final resolution for me will be when the CEP has more fully informed the public as to positive's and negative's of the choices ahead of us. Tom Palmisano is right, "we will not all agree on all choices that are made". But we should all agree that we have exhausted all the best alternatives with today's technologies for San Onofre and the storage of its nuclear waste. That the choices we make do not result in a nuclear waste accident at some point in time at San Onofre, resulting in keeping the future safe and bright for SoCal and all of our descendants.

5. I am not seeing a "defense in depth" for the storage of nuclear waste, which is a prime component for safety with the NRC and the nuclear industry from the start. I find this very troubling.

Sincerely,

**Gene Stone**
