Manuel, Tom, David and CEP Members:

After reading the subject reports and checking in with the Zion and Maine Yankee teams, I have a question that can be a comment or request for additional information. The issue is with regard to the decommissioning of the discharge tunnels,, intake structures, turbine and other non-rad structures. This is important in regard to the costs, and the final disposition with the Navy MCB Camp Pendleton. The practice for both Zion and Maine Yankee is to leave the discharge tunnels . The removal causes more harm to the environment than good. In the case of the turbine and other non-rad structures, the practice is similar to what is done for old coal or oil fired plants. The approved approach for Zion has been to demolish to 3 feet below grade, survey and release, then backfill. This saves a lot of money also by using the concrete from the turbine and non-rad structures as fill (aka beneficial reuse of concrete).

Can you please advise if this is considered in the planning phase?

Please advise.

Thanks

Ted Quinn

All - I am resending this e-mail as collectively the attachments were large PDF files and I want to ensure everyone has easy access to the drafts. If you had trouble with the e-mail or PDF documents, you may access the PSDAR, EIE, and DCE via hyperlinks in the news release that has been posted to the website:

Subject: Pre-Read for CEP Meeting

Members of the CEP,

Attached for your review are the draft PSDAR, EIE, and DCE for San Onofre. We will discuss these draft documents in detail at the next Regular Meeting of the CEP. We're in the process of rescheduling that meeting to either Aug. 28 or Sept. 17.

If there are material changes to these draft documents between now and the CEP meeting, we will provide an update. Drafts also will be posted to www.SONGScommunity.com.

Best regards,

Manuel
